A quick, partial and not very comprehensive overview

 Goal of this course: not a recipe cooking handbook, rather a path to mathematical reasoning which leads to dealing with quantitative aspects of decision making from data.

A quick, partial and not very comprehensive overview

- Goal of this course: not a recipe cooking handbook, rather a path to mathematical reasoning which leads to dealing with quantitative aspects of decision making from data.
- Professional AND citizen interest: ad-hoc exploitation of available data and don't be manipulated ?!

A quick, partial and not very comprehensive overview

- Goal of this course: not a recipe cooking handbook, rather a path to mathematical reasoning which leads to dealing with quantitative aspects of decision making from data.
- Professional AND citizen interest: ad-hoc exploitation of available data and don't be manipulated ?!
- ► few prerequisites: basic/intermediate maths and probability calculus.

A quick, partial and not very comprehensive overview

- Goal of this course: not a recipe cooking handbook, rather a path to mathematical reasoning which leads to dealing with quantitative aspects of decision making from data.
- Professional AND citizen interest: ad-hoc exploitation of available data and don't be manipulated ?!
- ► few prerequisites: basic/intermediate maths and probability calculus.
- Grail: linking data to mathematical modelling, objectively quantify and interpret conclusions and...awareness of limitations: statistics helps but won't make decision for you !

From data to modelling

and back

Two different situations might occur for the same modelling:

- empirical approach to gaining knowledge from an experiment repeated many times,
- study of a sample drawn from a population.

Preference between two possible configurations

Consumer ID	1	2	3	4	5	6	
Opinion	А	А	В	А	В	В	

We can denote by x_i successive opinions taking (binary) values "A" (= 0) or "B" (= 1). Mathematician sees that as realisation of random variables denoted X_i .

Randomness...

...arises from the choice of the questioned persons, NOT from in each actual answer.

Incidental reminder: Bernouilli distribution, with parameter 0

► laid question: is $p_0 > 1/2$ or < 1/2 ? This is a **test**.

Law of large numbers

Theorem

Let $X_1 \dots X_n$ be iid random variables with mean μ . Then the empirical mean converges in probability towards μ , i.e.:

$$\bar{X_n} := \frac{1}{n}(X_1 + \ldots + X_n) \longrightarrow \mu.$$

Law of large numbers

Theorem

Let $X_1 \dots X_n$ be iid random variables with mean μ . Then the empirical mean converges in probability towards μ , i.e.:

$$\bar{X_n} := \frac{1}{n}(X_1 + \ldots + X_n) \longrightarrow \mu.$$

In other term, for all $\epsilon > 0$, $P\left(\mid \bar{X_n} - \mu \mid > \epsilon \right) \to 0$

イロト 不得 トイヨト イヨト ヨー のくや

Central limit theorem

Theorem

Let $X_1 \dots X_n$ be iid random variables which admit an order 2 moment. Denote by μ and σ the corresponding mean and standard deviation, then:

$$\frac{\sqrt{n}}{\sigma}(\bar{X_n} - \mu) \longrightarrow \mathcal{N}(0, 1).$$

イロト 不得下 イヨト イヨト

Central limit theorem

Theorem

Let $X_1 \dots X_n$ be iid random variables which admit an order 2 moment. Denote by μ and σ the corresponding mean and standard deviation, then:

$$\frac{\sqrt{n}}{\sigma}(\bar{X_n} - \mu) \longrightarrow \mathcal{N}(0, 1).$$

In the case of distribution with density functions, this means that

$$P\left(\frac{\sqrt{n}}{\sigma}(\bar{X_n} - \mu) \le x\right) := F_n(x) \longrightarrow P(Z \le x) = \frac{\int_{-\infty}^x e^{-z^2/2} dz}{\sqrt{2\pi}}$$

► Back to the "preference" example: A vs. B.

Preference between two possible configurations

Consumer ID	1	2	3	4	5	6	
Opinion	А	А	В	А	В	В	

• We compute $\bar{x_{100}} = \frac{x_1 + \dots + x_{100}}{100} = 0.42$.

► Back to the "preference" example: A vs. B.

Preference between two possible configurations

Consumer ID	1	2	3	4	5	6	
Opinion	А	А	В	А	В	В	

- We compute $\bar{x_{100}} = \frac{x_1 + \dots + x_{100}}{100} = 0.42.$
- Our intuition and the LLN tell us that p_0 is "close" to 0.42.

► Back to the "preference" example: A vs. B.

Preference between two possible configurations

Consumer ID	1	2	3	4	5	6	
Opinion	А	А	В	А	В	В	

- We compute $x_{100}^- = \frac{x_1 + \dots + x_{100}}{100} = 0.42.$
- Our intuition and the LLN tell us that p_0 is "close" to 0.42.
- ► Can we conclude ? Is this **estimate** enough ?

Let's play around the Central limit theorem...

at the price of a slight risk

• we directly derive
$$rac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n}-p_0)
ightarrow \mathcal{N}(0,1)$$
 so

E. Rachelson & M. Vignes (ISAE)

2013 11 / 13

at the price of a slight risk

▶ we directly derive
$$\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n}-p_0) \rightarrow \mathcal{N}(0,1)$$
 so

▶ with a confidence level (what is that ??) of 95%: $\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n} - p_0) \le u = 1.96$. This is equivalent to:

イロト イロト イヨト 一支

at the price of a slight risk

▶ we directly derive
$$\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n}-p_0) \rightarrow \mathcal{N}(0,1)$$
 so

at the price of a slight risk

▶ we directly derive
$$\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n}-p_0) \rightarrow \mathcal{N}(0,1)$$
 so

▶ with a confidence level (what is that ??) of 95%: $\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}} (\bar{X_n} - p_0) \le u = 1.96.$ This is equivalent to:

•
$$p_0 \in I_n := \left\lfloor \bar{X_n} - 1.96 \frac{\sqrt{p_0(1-p_0)}}{\sqrt{n}}; \bar{X_n} + 1.96 \frac{\sqrt{p_0(1-p_0)}}{\sqrt{n}} \right\rfloor,$$

▶ again, does this help ?

at the price of a slight risk

▶ we directly derive
$$\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n}-p_0) \rightarrow \mathcal{N}(0,1)$$
 so

▶ with a confidence level (what is that ??) of 95%: $\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n}-p_0) \le u = 1.96$. This is equivalent to:

•
$$p_0 \in I_n := \left\lfloor \bar{X_n} - 1.96 \frac{\sqrt{p_0(1-p_0)}}{\sqrt{n}}; \bar{X_n} + 1.96 \frac{\sqrt{p_0(1-p_0)}}{\sqrt{n}} \right\rfloor,$$

- ▶ again, does this help ?
- ▶ yes, using the simplifying trick $\sqrt{x(1-x)} \le 1/2$: $I_n \subseteq [\bar{X}_n - 1/\sqrt{n}; \bar{X}_n + 1/\sqrt{n}] = [32\%; 52\%]$ in our scenario. Your final conclusion ? Again what is 95% here ?

Concluding the example

at the price of a slight risk

▶ we directly derive
$$\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n}-p_0) \rightarrow \mathcal{N}(0,1)$$
 so

▶ with a confidence level (what is that ??) of 95%: $\frac{\sqrt{n}}{\sqrt{p_0(1-p_0)}}(\bar{X_n}-p_0) \le u = 1.96$. This is equivalent to:

•
$$p_0 \in I_n := \left\lfloor \bar{X_n} - 1.96 \frac{\sqrt{p_0(1-p_0)}}{\sqrt{n}}; \bar{X_n} + 1.96 \frac{\sqrt{p_0(1-p_0)}}{\sqrt{n}} \right\rfloor,$$

- ► again, does this help ?
- ▶ yes, using the simplifying trick $\sqrt{x(1-x)} \le 1/2$: $I_n \subseteq [\bar{X}_n - 1/\sqrt{n}; \bar{X}_n + 1/\sqrt{n}] = [32\%; 52\%]$ in our scenario. Your final conclusion ? Again what is 95% here ?
- is the conclusion similar if n = 1,000 ?

Note: 95% could have been replaced by 99%. How could this have affected the conclusion ? What about 100% ?

イロト イポト イヨト イヨト 二日

decision depends on what is tested ?!

► (H₀) is the basic hypothesis. It will be rejected iif data strongly supports it (e.g. dangerous drug or alleged innocent). Then

decision depends on what is tested ?!

- ► (H₀) is the basic hypothesis. It will be rejected iif data strongly supports it (e.g. dangerous drug or alleged innocent). Then
- ► (H₁) is the alternative hypothesis which would be accepted iif (H₀) was regognised to be unacceptable.

decision depends on what is tested ?!

- ► (H₀) is the basic hypothesis. It will be rejected iif data strongly supports it (e.g. dangerous drug or alleged innocent). Then
- ► (H₁) is the alternative hypothesis which would be accepted iif (H₀) was regognised to be unacceptable.
- ▶ Back on the example: do you want to test (H₀) $p_0 \ge 1/2$? Or (H₀ ') $p_0 \le 1/2$? Which one is the sensible/aggressive choice ?

- ▶ Back on the example: do you want to test (H₀) $p_0 \ge 1/2$? Or (H₀ ') $p_0 \le 1/2$? Which one is the sensible/aggressive choice ?
- lessons from this: tests are not reductible to confidence intervals and...don't be fooled by an obscure choice of hypotheses !

From 11th January to 29th March 2013, you will hear about:

 descriptive statistics and modelling: estimation, dispersion measure, confidence intervals, PCA and perhaps more (CA, clustering, risk function).

- descriptive statistics and modelling: estimation, dispersion measure, confidence intervals, PCA and perhaps more (CA, clustering, risk function).
- ► Tests, ANOVA (one, several factors, analysis of covariance)

- descriptive statistics and modelling: estimation, dispersion measure, confidence intervals, PCA and perhaps more (CA, clustering, risk function).
- ► Tests, ANOVA (one, several factors, analysis of covariance)
- ► (linear) Regressions

- descriptive statistics and modelling: estimation, dispersion measure, confidence intervals, PCA and perhaps more (CA, clustering, risk function).
- ► Tests, ANOVA (one, several factors, analysis of covariance)
- ► (linear) Regressions
- Trees and ensemble methods

- descriptive statistics and modelling: estimation, dispersion measure, confidence intervals, PCA and perhaps more (CA, clustering, risk function).
- ► Tests, ANOVA (one, several factors, analysis of covariance)
- ► (linear) Regressions
- Trees and ensemble methods
- ► Kernels and parcimony
